

Austral & Malvinas Basins Oil Study

Regional Petroleum Geochemistry of Crude Oils from the Austral and Malvinas Basins

GeoMark Research has completed an evaluation of the petroleum systems of the Austral and Malvinas Basins. The study involves the detailed analysis of 16 crude oil samples collected from both basins. Particular attention was placed on obtaining oils from the limited number of Malvinas basin wells, where both high and low wax oils have been reported.

The purpose of this project was to:

- a) Characterize and map the distribution of oils from the two basins,
- b) Identify and evaluate the petroleum systems active within the basins, and
- c) Assess the potential of the region.

This interpretive assessment is finished and ready for delivery as a PDF and ArcGIS product. Data used in this interpretation is available for a separate subscription fee. Please contact GeoMark research for more information.

Samples: 16 Oils
12 Total Wells
