# Oils of Bolivia

## Geochemistry and Exploration Significance of Crude Oils And Oil Seeps from Bolivia

GeoMark Research, has completed a detailed, country-wide investigation of the geochemistry of crude oils and surface seeps from Bolivia. The study involves the detailed analysis of over 140 crude oil samples representing every sedimentary province in Bolivia. Results of the analysis are presented in a format designed to directly aid in exploration risk evaluation and opportunities for further analysis and predictive models are provided. This study represents the most complete analysis of the oil families of this highly prospective area.

Key conclusions include:

- Determination of the number of petroleum systems active within the region and criteria for their definitions,
- Ranking of the character and prospectivity of the identified source rocks and present day maturity,
- Evaluation of the overall potential of the Bolivian basins/regions

This interpretive assessment is finished and ready for delivery as a PDF and ArcGIS product. Data used in this interpretation is available for a separate subscription fee. Please contact GeoMark research for more information.

**Samples: 146 Oils**  
**116 Total Wells**
