

## Egypt Oil Study

Regional Petroleum Geochemistry of Crude Oils from the Gulf of Suez, Western Desert and the

GeoMark Research has completed a detailed evaluation of crude oil from produced oils in Egypt. This study characterizes oil samples from the Western Desert, Gulf of Suez and the Nile Delta regions and describes their organofacies and maturity for correlation to known source rocks. This work is presented to reduce risk and narrow the uncertainty associated with exploitation activities within this prolific area. This study consists of 63 produced oil samples completed for detailed geochemical analysis including quantitative biomarkers (terpanes and steranes), saturate and aromatic carbon isotopes, and gas chromatography.

Key observations from this analysis include:

- Maps of oil family distribution, based on organofacies and maturity analysis.
- Provides a geochemical framework for advanced reservoir geochemistry and reservoir connectivity studies.
- Oil and source correlation criteria for source extent and effectiveness and advanced fluid quality prediction.

The purchase price includes a perpetual license to all study documents and a 3-year subscription to the data. This study is available for immediate delivery
