

Far East Asia Oil Study

Regional Petroleum Geochemistry of Crude Oils of Japan, Coastal China, Taiwan and The Philippines

GeoMark Research has performed a regional assessment of the petroleum systems extending from Japan to the Philippines, including Bhoi Bay, East China Sea, Taiwan, Pearl River Delta and the Gulf of Tonkin. The results from this work proved particularly successful in delineating and characterizing the terrestrial oils types (deltaic, paralic and lacustrine) and provide depositional models for the region.

Key conclusions include:

- The number of petroleum systems active within the region,
- Evaluation and ranking of these systems based on quality and maturity,
- Assessment of the overall potential of the South China Sea basins/regions.

This interpretive assessment is finished and ready for delivery as a PDF and ArcGIS product. Data used in this interpretation is available for a separate subscription fee. Please contact GeoMark research for more information.

Japan 13 Samples
China 21 Samples
Taiwan 14 Samples
Philippines 54 Samples
