

Paradox Basin Oil Assessment

Detailed Interpretation of Crude Oil and Produced Gas Character

GeoMark Research has completed a detailed interpretation of oils and gas from the Paradox Basin. Based on proprietary analysis of 96 crude oil and 279 produced gas samples, this assessment is designed to aid in development and exploitation activities of the entire economic stratigraphic interval of the basin. Based on this dataset, GeoMark determined the most significant source rocks, their effective extent and range of fluid quality.

Key observations include:

- Identification of 4 major oil families with 9 subfamily definitions based on fluid quality.
- Delineation of effective extent of charge patterns of key oil families.
- Specific description of mixed, multisource reservoirs and the impact on fluid quality.

This interpretive assessment is finished and ready for delivery as a PDF and ArcGIS product. Data used in this interpretation is available for a separate subscription fee. Please contact GeoMark research for more information.

Well Count: >200
Oil Samples: 96
Gas Samples: 279
